THINKING AHEAD

YOUR GUIDE TO SCHOOL, STUDY AND WORK

A guide for young people who have had cancer
THINKING AHEAD

Your guide to school, study and work
Note to reader
We hope that this resource helps you to re-engage with school, study or work. While this resource is specific to Victoria, the main content will be relevant across Australia, despite differences in terminology and service names. This resource is a general guide. It is not a substitute for medical, legal or financial advice. If you need more information, your local Youth Cancer Service is a good place to start. All care was taken to ensure that the information was accurate at the time of publication.

Background
The need for this resource was identified through a Cancer Australia funded research project (APP1010977). This showed that many young people who had been diagnosed with cancer were not back on track with their education, training or employment, despite having completed treatment. Many of these young people were unsure how to re-engage with school, study and work and move on with their lives.

The development of this resource was funded by a Victorian Cancer Survivorship Program grant from the Victorian Department of Health and Human Services. It was developed through collaboration between The Royal Children’s Hospital Centre for Adolescent Health, ONTrac at Peter Mac Victorian Adolescent and Young Adult Cancer Service, Redkite and the Victorian and Tasmanian Youth Cancer Advisory Board. The content was developed from focus groups and broader engagement of young people who had experienced a diagnosis of cancer between the ages of 15–25, their parents and a range of professionals from health, education, government and non-government sectors.

Acknowledgements
We wish to thank the many young people and their families who willingly shared their personal stories with us to ensure the relevance of this resource. We also wish to acknowledge the invaluable contribution of our health professional advisory panel. We gratefully acknowledge the contribution of Robyn McNeil (project manager), Lucy Holland (writer) and Kaz Cooke (for her wonderful illustrations). Finally, we wish to congratulate the two young people on our project team, Maisy Stratford-Hutchings and Christie Allan – who both became employed during the course of this project!

Project team: Professor Susan Sawyer, Kate Thompson, Nicole Edwards, Dr. Lisa Orme, Nicole Schleicher, Julia Leigh, Maisy Stratford-Hutchings, Christie Allan
Writer: Lucy Holland

THINKING AHEAD
Your guide to school, study and work

School, study and work are really important parts of life. They are where we learn and develop skills. They’re also where we make and hang out with friends, play sport and have fun. Together with our families, it is through studying and working that we gain self-confidence, a sense of achievement and hope for the future. So, when something as big as cancer interrupts all that, it can be really hard to begin to fit life back together again.

Thinking Ahead has been developed to help you get back on track with school, study and work – during and after treatment. It covers some common experiences and effects of treatment up front so you can recognise these and know how best to manage them.

But Thinking Ahead is really about you – your whole life, your goals and your priorities.

Regardless of your situation or what the future may hold, Thinking Ahead will help you to:

→ Identify your goals and priorities in the moment (even if these are unclear right now)
→ Understand your options (even if you have no idea at the moment)
→ Understand the school, TAFE and university systems (even if they are complex)
→ Live your best life here and now (that’s the aim after all)!
“I’d just turned 18 and it was exams coming up and it was like...diagnosed with brain tumour...oh what, that’s not real, that’s something you see on RPA. You don’t know what to think, you don’t know what to expect. I didn’t care about anything. I’m like I don’t care about school, I don’t care about this, I don’t care about that. The Education and Vocation Advisor was like hey, this is important...what happens in the future? For your future? I wasn’t even thinking about the future. I was just thinking about the here and now...In a sense she grounded me and gave me perspective...There’s life after this...That is an important thing.”
TELLING IT LIKE IT IS

It is important that you can...

...live life in the here and now

TELLING IT LIKE IT IS
Cancer can disrupt so many aspects of life, including school, study and work…

“In your last cycle you’re looking at the end but you don’t want to get too caught up and be like, yeah it’s over, in case they’re like hey, actually, you need to do radiation now.”

You may feel like you’re not recovering as quickly as you thought you would. This can be scary. Treatment can have long term effects. These can be managed, if you understand what they are…

“Just before the diagnosis I was about to start a job and I was planning to study. When I was diagnosed everything just messed up suddenly. Now I am trying to catch up again.”

For many people, the end of treatment is a happy, exciting time. But it can also be scary. You may feel a little lost, isolated or unsure of what to do next…

“The focus during treatment was on the here and now. Very explicit details about what to expect. As soon as the last cycle finishes, that drops away. You felt really quite lost.”

Despite what others might say and the demands of treatment, lots of people want to stay connected with school, study and work…

“I was treated in the adult hospital… I was interested in going to school when I was diagnosed in year 10 but he (my oncologist) sort of didn’t even bother to ask… Like no, no I’ll write a letter, you don’t have to go to school for the whole year, don’t stress it. But I was like no, no, I want to go to school if I can, I want to be linked with school.”

It can be really hard to know how to get back on track after a break…

“I hope that I can do something that is uplifting, something better for next year. But really at the moment I don’t know exactly what to do.”

The important thing to know is that this is normal and there is support available to help.

“Support was there if you went and sought it… all the support is there but you need to know where to go, who to really connect into.”

The other thing to know is that life now is the most important thing. Regardless of your situation or what your future may look like, it is important that you can live life in the here and now. Thinking Ahead hopes to give you information to help you do this, as well as work toward your goals for your future.

“It helps to think of the future and that would maybe give you more of a reason to actually pursue your study if you can… instead of walking away from it and later on down the track being behind.”

After treatment, there might be an expectation that things will go back to normal, just like before. For some people things do. But for many people it’s not that simple…

“It’s a bit harder to get back to the normal pace of life, to the way you were before.”
One of the things that kind of made me hesitant to say that I needed help was that I was worried that people wouldn’t understand that even though I had finished treatment, things hadn’t gone back to normal.

Does everyone feel like this?

What is normal?

“One of the things that kind of made me hesitant to say that I needed help was that I was worried that people wouldn’t understand that even though I had finished treatment, things hadn’t gone back to normal.”
This section will cover some common ongoing effects of cancer and treatment and describe the way that these can get in the way of life. This is so you:

- Know what is normal
- Know what to do and where to ask for help
- Know how to reduce unwanted impacts
- Can live your best life here and now.

PHYSICAL CHANGES AND FATIGUE

“At the end of Year 11 they do like a week of Year 12 so I did that and I had to be at school all day for that entire week and oh my gosh I was exhausted. I finished treatment in January. I was like, I’ll be right, I’ll be sweet by the time I get back to school. I was wrong. No one was really like, you’re going to be really tired for ages. That was a big thing that I didn’t hear.”

Treatment can have loads of physical impacts. It can change how your body works and looks, how you feel about your body and your self-confidence. One of the most commonly experienced physical impacts is fatigue. Fatigue is extreme physical or mental tiredness. It can be frustrating and it can last a really long time. It’s important to know that fatigue is normal. It is not a choice. And there are strategies to help you manage. Some other common side effects of treatment include:

- Feeling really physically or mentally tired a lot of the time or needing a lot of rest or sleep
- Not being able to last a whole day at school, study or work
- Poor concentration, poor memory or lack of motivation
- Pain, swelling or scaring, tingling or numbness
- Changes to mobility, weight, hair, hearing, sexual function, sleep and appearance
- Self-consciousness about any or all of the above!

COGNITIVE (BRAIN, THINKING AND LEARNING) CHANGES

“I moved into first year uni and I was still feeling tired. It wasn’t until recently that someone actually mentioned that concentration would be a difficult thing. I was like yeah, that makes heaps of sense, no wonder I couldn’t deal with 75 minute classes.”

Cognitive changes include those that affect learning and thinking. These can include changes to concentration, memory, planning, organising and behaviour. Many people talk about experiencing ‘chemo brain’ after treatment. This is a real thing! People say it may feel like you’re in a fog, aren’t able to learn like you used to, or it can mean you have trouble remembering things or focussing like you did before. Some common signs include problems:

- Remembering things, staying focussed or concentrating
- Following instructions, learning new information or understanding things
- Planning, organisation and time management
- Problem solving or generalising skills
- Completing activities in a given time frame
- Writing, finding the right words to use
- Keeping up with conversations or games
- Socialising with friends.
EMOTIONAL CHANGES

“I was getting disappointed with myself... the students are must faster than me... the workload is too much... the teachers were so demanding.”

When you go through a stressful life event, it’s normal to feel a whole range of emotions. Lots of people talk about being on an emotional roller coaster. While this is normal, if you feel like any of your emotions are getting hard to handle, it is important to tell someone you trust and ask for help. Some common signs include:

- Depression or low mood
- Anxiety, excessive worry in general and/or lots of worry about the future, including about cancer returning
- Persistent sadness or crying, or a sense of loss
- Anger, irritability, impatience, lashing out, frustration or guilt
- Emotional fatigue or tiredness
- Lack of motivation
- Withdrawal from others, wanting to be by yourself all the time
- Not engaging in normal activities (like school, study, work or other things you used to enjoy)
- Loss of sleep, eating or weight
- Loss of confidence, changed sense of oneself.

SOCIAL CHANGES

“I think if someone was like, you need to really re-consider your load this year, I would have been like ok, maybe. Because two weeks into Year 12, I was like I can’t do five subjects and I dropped one... And then throughout Year 12 I saw all of my friends working and doing school work until 10:00 at night and it would get to dinner time for me and I would be like, couch!”

Social changes may include changes to school, study and work, other activities like sports and music, and relationships in your life. You may not be doing the same things and seeing the same people as you were before. Sometimes these changes are positive: you may make new friends, receive lots of support, or identify new priorities for your life. It’s also normal if some of these changes are hard. You may feel like you are losing touch with school, study and work, people may drift away, not understand, or even treat you differently. Some common signs of negative social change include:

- Disruption to, or disengagement from school, study or work
- Losing interest in, or not being able to doing things that you usually enjoy (e.g. sport)
- Changed relationships with family, partners or friends
- Lost relationships or friendships
- Withdrawing from others or feeling socially isolated
- Mood changes including low mood, anxiety, persistent worry or sadness, irritability, impatience, lashing out or frustration
- Not knowing what to do next.

There are lots of changes described in this section. You may be experiencing a few, some or many. The good news is there are strategies that can help you to manage. The most important thing is to talk to your oncologist, GP or healthcare team about any changes you experience. See Strategies and Support pg. 57.

- See Appendix B: Useful Links and Resources pg. 70.

Did you know...

Over time, many people report positive effects of their experience with cancer including new possibilities, relating better to others, a sense of personal growth and a new appreciation for life.

Did you know...

Up to 90% of people who have received radiation therapy and 80% of those who have received chemotherapy experience fatigue.
Focusing on you, your life, goals and priorities is important. Some people will have these sorted, but what if you don’t know what you want to do? This section is designed to help you to think through and identify what’s important to you and how you might stay connected to school, study, work or life. The guide at the end of this section can help you to identify your needs, goals, priorities – and the next steps.
WHAT'S IMPORTANT TO YOU?
To work out your goals and priorities it’s important to identify what matters in your life right now. These questions may help:
- What makes me smile or makes me happy?
- What do I love to do?
- What do I want to focus on?
- What are my goals?
- What are my priorities?
- What do I want to achieve?
- What do I not want or not like to do (sometimes this is easier to figure out!)
- What can I manage right now?

Everyone’s goals and priorities are different, but you might think about:
- Friends, family and partners
- Health
- School and study
- Work
- Music or art, sport or dance
- A sense of contribution
- Having fun
- Experiencing new things.

WHAT ARE YOUR NEEDS?
Understanding how you’re feeling, where you are at and what you need is the first thing to do. It may be useful to consider your needs across the following areas.
- Physical needs: fatigue, mobility, pain, hair changes, weight, tiredness
- Cognitive needs: learning, remembering, concentrating, time management
- Emotional needs: low mood, anxiety worry, sadness, lack of motivation, fatigue
- Social needs: participating in school, study, work, activities and relationships
- Practical needs: housing, money, legal stuff, travel, insurance
- Learning needs: learning, memory, managing time, managing in the classroom.

WHAT, WHO, WHERE
| What are my strengths? |
| What are current limitations for me? |
| What questions do I have? |
| What do I need to know? |
| Who can I talk to? |
| Where can I go for more information? |

</tr>
</tbody>
</table>

### What Next?

Once you’ve figured out your goals and priorities, it’s important to think about what you need to do to make them happen. Some things that can help:

- Take your time and be kind to yourself
- Identify your strengths and limitations
- Identify supports that may be helpful (e.g. friends/family/healthcare team/GP)
- Talk to people who are doing what you want to do
- Explore your options
- Don’t be afraid to ask for help – there’s no such thing as a stupid question!

Knowing how to advocate for yourself and your needs is really important. It gives you the best possible chance of accessing the help, information and support that’s right for you. (See Strategies and Support pg. 57).

### Tips and Tricks

- You may not be able to identify all the things you need, or the things that matter to you all at once, so take your time
- Your lists will probably change over time too
- Don’t limit yourself by thinking things are too hard – you don’t know until you try
- Believe in yourself, your values and your abilities
- Think about what really matters here and now
- Dream big.

- See Appendix B: Useful Links and Resources pg. 70.
School, study and work are really important parts of life, for learning and earning a sense of achievement, contribution, social activities and making friends. They can be rewarding but they can also be hard to manage at the best of times. There are lots of options and supports available to help you get back on track.
EVERYONE’S EXPERIENCE IS DIFFERENT

In terms of the effects on school, study and work, everyone’s experience is different. Some people can remain engaged throughout treatment...

“It feels good to do something (school, study or work) on treatment if you can. It feels like you are doing something, not just sitting around.”

For others it’s not this simple...

“Again I withdrew from the course... I was really disappointed – why can’t I go back to study? I thought no, you have to think about another option.”

Some find the school system is helpful, flexible and supportive...

“My school was very good for the most part. The careers advisor, she was the one who was helping me with everything...I found people I liked.”

“A lot of my teachers were fantastic in that they would give me assessments appropriate for what I was dealing with.”

Some people don’t know where to start to re-engage with school, study or work...

“You go oh...I don’t know, I don’t know where to go!”

Sometimes there’s information overload, especially at the beginning...

“I was told about a lot of things very early on and it was so quickly pushed to the back of my mind and it was just another thing that I was told...this is available for you, this is available for you, this is available for you but also you’ve got to have a blood test...it’s just so much...”

Some people think that they don’t need help. But this can change over time...

“Na, na I don’t need it, I’m fine... then when I got to Year 12 I thought mmm...I should probably get some help.”

Others think that by accepting support, it may take away support from other people (this isn’t the case!)

“I shouldn’t be using these resources that I don’t need...Someone else could use this better than I could.”

LEARNING FROM EXPERIENCE: IMPORTANT THINGS TO KNOW

Regardless of your situation, help and support are available to everyone. Getting support as early as you can (even if you don’t need it straight away) means that you will already have a relationship with people and services that can support you. It also means that you’ve got back-up options there if you need them. It may even mean that you’re told about other supports and options that you wouldn’t otherwise know about.

“I recommend engaging as early as you can because you might not find yourself engaging every week or every month during treatment but you’ve already set up a relationship and a rapport with the service and you’re familiar, so when you do go oh, hang on, I’m ready, it doesn’t then take four weeks to get in to see that person and your motivation has to be kept up for four weeks while you’re waiting.”

“(The Youth Cancer Service) provided support in all senses of the word, financial support, emotional support, for my family... the connections I have made with people, other young people and the staff.”
OPTIONS AND PATHWAYS

Whatever life throws your way, there are lots of options available for school, study and work. Knowing which one is right for you will depend on your goals, priorities, interests and needs. There is no right or wrong – everyone’s path will be different. The options for Victoria are presented here. These are good to know because in Victoria it is compulsory to be engaged in either school or training until you are 17 years old. For options in other states (See School pg. 30):

VICTORIAN SCHOOL, STUDY AND WORK OPTIONS

| VCE | Accredited secondary qualification. Can provide an ATAR score for university entry/study score for entry into TAFE courses. A minimum of 16 units required. Assessed by school based assessment and external exams. Options include:
| VCA | Accredited secondary qualification. Hands-on option that provides practical, literacy/numeracy, industry and personal skills. A good option for those interested in apprenticeships, TAFE or work after school. Can comprise VCE, VET, Further Education (FE) and VCAL units. Can also complete a part time apprenticeship/traineeship at the same time. Can also transfer between VCAL and VCE. |

- An academic pathway
- A VET (Vocational Education and Training) pathway – provides a nationally recognised industry based qualification and VCE
- School-based apprenticeships
- A higher education option.

- Can be completed in two or more years (there's no time limit!)
- If over 18 can do a 12 month VCE through a TAFE that offers this
- Options available depending on goals, priorities, interests and learning needs
- Can provide a score for entry into higher study (university).

- Can be completed in one or more years (there's no time limit!)
- Flexible. Options available depending on goals, priorities, interests and learning needs
- Can be completed in supportive school environments or adult learning environments including Adult Community Education (ACE) Centres or at TAFE
- Support options available.

University
(undergraduate, masters and post-graduate)

TAFE
(Pre-accredited training at Cert I–IV levels, Associate Diploma or Diploma)

Work
### MORE INFORMATION: USEFUL LINKS AND RESOURCES

- Your local Youth Cancer Service

- Your healthcare team
- See Appendix B: Useful Links and Resources pg. 70.

### MANAGING YOUR RETURN TO SCHOOL, STUDY OR WORK

It’s normal to feel a bit uncertain about getting back into school, study or work. Common worries include:

- How to keep up with school work or meet academic requirements
- How to develop new routines and manage new systems
- How to fit back in, changed friendships, being left out or being bullied
- How to tell other people, people not understanding, or facing awkward questions
- Being the centre of attention, or people staring
- Getting the centre of attention, or people staring
- How to tell other people, people not understanding, or facing awkward questions

There are Education and Vocation Support programs throughout Australia that can help you navigate all your options. These are available through your local Youth Cancer Service or Redkite.

### TAFE

</tbody>
</table>

### Did you know...

In 2011, there were nearly 14,000 students enrolled in VCAL in Victoria. The number of students choosing this option is increasing!
Getting back to school as early as you can is really beneficial. School can help you stay connected with friends and other young people, give you something to focus on, and give you a sense of achievement.

“I was half-way through Year 11 when I was diagnosed. I got a lot of work done for school while I was there (at hospital), even though I really didn’t feel like it.”
PATHWAYS AND LEARNING STYLES

In Victoria it is compulsory to be engaged in either school or training until you are 17 years old. The two main pathways through Year 11 and Year 12 at school in Victoria are VCE and VCAL. Options for each state are provided below. Learning styles and strengths vary from person to person. Your individual learning style, strengths and weaknesses, combined with your goals, interests and priorities will determine the pathway that you take. If your strengths or limitations change over time, the pathway that you take may change too. That’s ok, it’s just about figuring out the right next step.

School options by state

→ **Australian Capital Territory**

→ **New South Wales**
  Record of School Achievement (ROSA – can be obtained if one has left school prior to year 12 and completion of HSC)/Higher School Certificate (HSC) – year 12 qualification (includes VET options).

→ **Northern Territory**
  NT Certificate in Education and Training (NTCET – Year 12).

→ **Queensland**
  Queensland Certificate of Education/Queensland Core Skills/Queensland Certificate of Individual Achievement/TAFE.

→ **South Australia**
  South Australian Certificate of Education (Year 12)/Special Provisions/SACE International (South Australian Matriculation Program) – an internationally recognised one year pre-university program.

→ **Tasmania**
  Tasmanian Certificate of Education/Post-Compulsory Qualifications/Senior Secondary Equivalent Qualifications (equivalence for other states, territories and countries).

→ **Victoria**

→ **Western Australia**
  WA Certificate of Education (WACE)/Gifted and Talented Programs.

| VCE Special Consideration | Special Consideration for coursework and exams is available:  
  - Coursework  
    - Special Consideration is determined by the school  
    - School Assessed Coursework (SACs) can be modified and alternate dates arranged.  
  - Exams  
    - Special Consideration is determined externally by the Victorian Curriculum and Assessment authority (VCAA)  
    - The Special Entry Access Scheme (SEAS) allows for Special Consideration for course entry into university to applicants when education was affected by disadvantage (including disability or medical condition)  
    - Exam scores can be derived following consultation with your school and medical team. |
| Redkite education grants | Redkite provides grants of up to $1,000 to help young people up to the age of 24 achieve their study and work goals. These are available for up to two years after treatment ends and can be used for expenses such as:  
  - Tutoring or coaching  
  - Course fees  
  - Classroom support  
  - Materials and equipment such as books and laptops  
  - Trades/licenses. |

**Did you know...**

You can complete VCE in two or more years and VCAL in one year or more – there’s no time limit!

**MORE INFORMATION: USEFUL LINKS AND RESOURCES**

- Your school
- Your local Youth Cancer Service
- **Redkite: Education and Career Support** Consultants provide personalised assistance for 15-24 year olds to get back on track with school, study or work
- **See Appendix B: Useful Links and Resources pg. 70.**

**Tips and Tricks**

- Try to remain engaged with school as much as you can or re-engage as quickly as you can
- Identify a key contact at your school (e.g. year head co-ordinator, favourite teacher) as the main person to ask questions, access information and share information with other teachers
- Find out your options and about what supports are available to you
- Consider alternative pathways, depending on what else you are having to manage – there may be more opportunities than you know
- Be kind to yourself.

**Did you know...**

You can complete VCE in two or more years and VCAL in one year or more – there’s no time limit!
TAFE (Technical and Further Education) offers a huge variety of courses and study options for people over 15 years old. These are offered through a range of colleges, Adult Community Education Centres and institutions. TAFE offers options for completing VCAL and adult VCE, apprenticeships or traineeships and further education in the form of Certificates, Diplomas or Advanced Diplomas. These courses can be really flexible and can carry you right from learning foundation skills, into university or work.

“If I didn’t have that (study option through TAFE) I don’t know where I would be. It’s been so helpful. It’s just the practice of coming in every week and sort of getting involved in something. Just getting into learning again.”
PATHWAYS

These are various pathways through TAFE and the levels of qualifications offered, with criteria for entry into each qualification. These differ by length, course requirements and fees. You can work your way up, depending on what you want to do. Course advisors at school and TAFE can help you decide on the best option for you.

“I think I’ll just end up, if I want to study, just bridging from TAFE or going to uni as a mature age (student).”

<tr>
<td>Support services</td>
<td>TAFEs are all different but they have a range of support services. The key is to find out the details of the support service at your TAFE and register with them as soon as possible – preferably when you enrol. Finding a point of contact straight away is important. It means that when you need help it will be there. Support services can include:</td>
</tr>
</tbody>
</table>
| Student supporter services (called different things at different TAFEs) can assist with developing individualised support plans, which may cover: | ➔ Meeting physical needs (i.e. how you get around, where you sit, where your locker is, access etc.)  
                                            ➔ Assisting with study in hospital or at home  
                                            ➔ Providing options for catch up classes and additional tutoring  
                                            ➔ Having someone to help with writing, reading or learning  
                                            ➔ Using technology to help learning  
                                            ➔ Modifying information provision (visual, verbal, written etc.)  
                                            ➔ Modifying workload, assessments and exams  
                                            ➔ Having extra time or modified deadlines  
                                            ➔ Considering how your confidentiality may be respected  
                                            ➔ Accessing assessments available to support learning and identify strengths and limitations so adequate support can be put in place. |
| Academic skills or learning skills units | ➔ Support call centres and student support workers  
                                           ➔ Course and career advisors or job and skills centers |
<table>
<thead>
<tr>
<th>TAFE support</th>
<th>Description</th>
</tr>
</thead>
</table>
| Support services (cont.)                   | → GP clinics  
→ Counselling services  
→ TAFE specific programs (e.g. Reconnect in Victoria to support early school leavers under 24.) |
| Special Consideration                      | → To enrol in TAFE there is a literacy/numeracy test to determine the need for additional assistance  
→ Special considerations are also available depending on your TAFE and circumstances. These can relate to assessments, exams and revised scores or grades. |
| Redkite education grants                   | → Provides grants of up to $1,000 to help young people up to the age of 24 years achieve their study and work goals. These are available for up to two years after treatment ends and can be used for expenses such as:  
• Tutoring or coaching  
• Course fees  
• Classroom support  
• Materials and equipment such as books and laptops  
• Trades/licenses. |
| Charlie Bell scholarship                   | → Provides financial assistance toward vocational or tertiary studies for people aged 15–20 who have experienced serious illness. These are one-off grants of up to $5,000 that can assist with fees, apprentice tools, books or supplies for study. Applications close 30 September each year. |

**Tips and Tricks**

→ Identify appropriate support at your TAFE and enrol with support services as early as you can – preferably when you enrol to study. That way, support will be there if you need it in the future (even if you don’t think you need it!)

→ A contact at TAFE can be useful for asking questions, accessing information and sharing information with others for you

→ Find out your study options

→ Consider your study load. It may be worth starting with a lighter load (fewer subjects) than you think you can manage and working up so you don’t set yourself up at the beginning for something that is too tough to manage

→ Be kind to yourself.

**Did you know...**

There are over 45 TAFE institutions throughout Australia that offer hundreds of course options!

**MORE INFORMATION: USEFUL LINKS AND RESOURCES**

→ Your local TAFE and TAFE Support Services

→ Your local Youth Cancer Service

→ Redkite: Education and Career Support Consultants provide personalised assistance for 15-24 year olds to get back on track with school, study or work.

→ See Appendix B: Useful Links and Resources pg. 70.

TAFE trains the majority of nurses in Victoria (over 500 people each year!)
There are over 40 universities in Australia that offer degrees across more than 80 fields of study. University study is really flexible and it can be a great option if you’re not 100% sure about your future career path, but you know what you’re interested in. It can also be very focused depending on the field you choose. Degree qualifications are essential for certain professions. Entry into university is determined either by the Year 12 entry score (e.g. the Australian Tertiary Admission Rank or ATAR) or by alternative entry pathway programs. University also offers access to a whole new social, sporting and creative life.

“My mum and dad keep telling me that they remember sitting down with the doctors saying this kid will struggle through secondary school. And now I have a master’s degree.”
The levels of qualification offered through university are described below. You can usually enrol in as many or few subjects as you want, or think you can manage each semester. There may also be online study options available. There are course advisors at school, TAFE and university who can help you decide on the best option for you. Or, if you're not sure where to start, it may be worth attending a university Open Day to find out what's on offer.

| Charlie Bell scholarship | Provides financial assistance toward vocational or tertiary studies for people aged 15–20 who have experienced serious illness. These are one-off grants for up to $5,000 that can assist with fees, apprentice tools, books or supplies for study. Applications close 30 September each year. |

"Before returning to uni, I told a couple of friends in my course about my diagnosis and treatment. It’s helpful to have someone who knows what’s going on if you’re struggling or need a little extra support sometimes. It also meant that they wouldn’t freak out or make a fuss when they saw that I’d lost my hair. On my first day back, one of them met up with me before class so that we could walk in together which made me feel a bit more comfortable amid the stares."

Tips and Tricks

- Identify appropriate support at your university and enrol with them as early as you can – preferably when you enrol. That way support is there if you need it in the future (even if you don’t think you need it now!).
- Find out your study options
- Consider your study load. It may be worth starting with a lighter load (fewer subjects) than you think you can manage and working up so you don’t set yourself up at the beginning for something that is tough to manage
- Be kind to yourself.

- See Appendix B: Useful Links and Resources pg. 70.
Get back to routine and daily life

Work is about earning money, financial security and independence. It can also provide a sense of contribution, self-worth and quality of life. Returning to work or starting a new job can help you get back into a routine and daily life. Although this can be daunting, it helps to know that there are options available and to understand your employment rights.

“With work there’s always these big health certificates about ability to work. I think I’m ok but I’m not sure what I need to put down in here. I don’t know what information I need to give.”
**LEGAL STUFF: RIGHTS AND RESPONSIBILITIES**

**Disclosure**
It’s **not compulsory** for you to tell your employer, colleagues or future employers about your cancer experience. It’s also good to know that potential employers cannot ask about medical diagnoses in job interviews. However, you do have obligations to tell your employer if cancer or treatment will affect your ability to do the essential requirements of the job. You’re also obliged to tell them if your illness could reasonably cause a health and safety issue for you or others. Telling your employer (at least enough to meet your obligations) has other benefits:

→ They can be more understanding, supportive and accommodating about your needs
→ It can be more easily explained if you need to take personal or sick leave
→ It can help you to work through any misunderstandings openly
→ It can help you to reduce any stress associated with not being up front at the beginning.

Most employers will be understanding and make allowances if needed. Not being up front with your employer can have implications for worker’s compensation (if it’s required). It’s worth knowing that if your employer requires a medical certificate, your doctor just has to confirm in writing that you’re unwell. They don’t have to say that you have or have had cancer.

**Privacy**
Your employer requires your consent to tell other people about your health unless it poses a severe health risk to you or others. If you believe your personal information has been shared without reasonable cause and without your consent, first talk to your employer. You can also seek advice from the Office of the Australian Information Commissioner in your state or territory (see Appendix B: Useful Links and Resources pg. 70).

**Reasonable adjustments and flexible working arrangements**
Under National Employment Standards you have the right to ask for flexible working arrangements. Under discrimination laws, employers are also required to make ‘reasonable adjustments’ to ensure that you are not at a disadvantage compared to other people in the workplace. This is unless the adjustments are likely to cause ‘unjustifiable hardship’ to the organisation. ‘Reasonable adjustments’ may include:

→ A phased return to work
→ Flexible working arrangements (e.g. from the office and home)
→ Time off for appointments or treatment
→ Extra breaks to manage tiredness and fatigue
→ Flexible duties or temporary duties
→ Ensuring that the environment meets your needs (such as changes to the workplace or the use of technology to assist you in your work).
→ Access to workplace support systems that may include: employee assistance programs (EAP), counselling or mentoring.

“It’s hard to claim that (discrimination) if you don’t tell them...so I’m sort of at that point now where I’m like, well if I don’t tell you and something happens at work and it’s because I didn’t concentrate or I miss something...it’s kind of my fault because I didn’t tell you.”
GOING BACK TO WORK

Going back to work can be a really big step. Giving yourself plenty of time to prepare can make returning to work feel less overwhelming. There are some things that can help with the process, including developing a Return to Work plan that can be flexible and allow you to ease in. It will probably be useful to meet with your employer before you return, to discuss:

- Your needs and capacity
- Your role and its demands
- Telling others. How this will be done, what you want to share (and what you don’t want to share) and how your confidentiality will be respected
- Return to Work or Disability Management Plans, which may consider:
  - The planned date of return to work
  - The time period of the plan
  - Flexibility (e.g. your health and capacity, work days, time able to work, time off required for appointments or treatment etc.)
  - Phased or staged return to work
  - Specific restrictions on your role or recommendations as stated by your healthcare team
  - Physical, environmental and technological supports required (chair, physical modifications etc.)
  - Details of the people responsible for monitoring the progress of the plan
  - Planned follow up meetings.

You may find it helpful to provide a letter from your oncologist or healthcare team outlining any impacts on work if you want to disclose this level of information.

“My boss and I decided together that it would be helpful for her to briefly let my colleagues know why I had taken some time off work. I appreciated that they were prepared in this way when I was able to go back to work, because everyone was really supportive and it meant that I avoided a lot of awkward questions!”

It’s also possible that your career plans and priorities may have changed as the result of your cancer experience. In this case, you might be looking at starting a new job!

Did you know...

Today, people in Australia have an average of 17 jobs in their lifetime and five careers! So, it’s perfectly ok not to know everything about what the future will hold right now!

GETTING A NEW JOB

Whether you’re looking for your first job or want to make a change, there are many options available. Take your time to work out what is right for you. If you’re qualified for a job and physically able to do the work required, your health history shouldn’t affect your ability to get the job. It’s also good to know that potential employers cannot ask about any medical diagnoses in interviews. However, it’s common to be concerned about explaining health-related gaps in your CV. Some recommendations:

- Keep explanations for gaps simple and straightforward. Some people chose to call this a ‘career break’ while others say that it was related to a health issue that is now resolved
- Think about what you’ll say if asked about a gap and how you’ll respond to questions
- You may find it helpful to provide a letter from your oncologist or healthcare team outlining any impacts to work.

Keep in mind that job searching can be stressful and occasionally discouraging for everyone. Taking your time, being kind to yourself and taking one step at a time can boost your self-confidence and help you stay positive.

“With study you can just have a case worker or a liaison or an education and vocation person... but when it comes to a job you can’t really send that person in for a job interview...”

</tr>
</tbody>
</table>
| Centrelink                      | Centrelink offers a range of financial support options and pensions depending on your circumstance. Talk to your local hospital social worker for more information about what you may be eligible for:  
                                         - Disability payments  
                                         - Sickness payments  
                                         - Youth allowance  
                                         - Mobility allowance  
                                         - Rental assistance  
                                         - Healthcare cards |
| Leukaemia Foundation            | Offers help for people with leukaemia, lymphoma, myeloma and related blood disorders. Provides support with accommodation, transport and some financial assistance. |
| Patient Assisted Travel and Accommodation Schemes (PATS) | Financial help in relation to transport and accommodation if you have to travel a certain distance for treatment. Talk to your local social worker for more information. |
| Redkite                         | Provides financial assistance to cover the cost of essential items. Funds can be accessed for up to 12 months after treatment ends. These include:  
                                         - Bills for electricity, water, gas, rates  
                                         - Internet and phone costs  
                                         - Car registration, insurance and repairs  
                                         - Vouchers for food and fuel |
| Ronald McDonald House – Charlie Bell Scholarship | Provides financial assistance for vocational or tertiary studies for people aged 15-20 who have experienced serious illness. One-off grants for up to $5,000 to assist with fees, apprentice tools, books or supplies. Applications close 30 September each year. |
| Utility relief schemes          | These are state government schemes that offer relief from utility bills (e.g. gas, electricity, water) in VIC, NSW and SA. If you are in Victoria you need to demonstrate financial hardship. |

See Appendix B: Usef Links and Resources (pg. 70) for contact details. You can also talk to your local Youth Cancer Service or social worker for more information.
There are lots of strategies to support you, no matter what your situation. Some of these are described here. It is also important to talk to your healthcare team or someone you trust if you have questions or are worried about how you are feeling at any stage.

See Appendix B: Useful Links and Resources pg. 70.
Important things to know and do

<table>
<thead>
<tr>
<th>Suggestions</th>
</tr>
</thead>
<tbody>
<tr>
<td>Adjusting after treatment takes time. Be kind to yourself and give yourself time to adjust. The following may also help:</td>
</tr>
<tr>
<td>→ Identify your needs, goals and priorities and the activities you can and want to do (See All About You pg. 15)</td>
</tr>
<tr>
<td>→ Set small and manageable goals every day or week</td>
</tr>
<tr>
<td>→ Develop routines</td>
</tr>
<tr>
<td>→ Plan rest breaks in the day</td>
</tr>
<tr>
<td>→ Plan for extra time to complete activities</td>
</tr>
<tr>
<td>→ Keep a diary about what you achieve and how you are feeling so you can track your progress and changes over time.</td>
</tr>
</tbody>
</table>

Managing physical and emotional changes

<table>
<thead>
<tr>
<th>Suggestions</th>
</tr>
</thead>
<tbody>
<tr>
<td>Thinking about sleep, nutrition, exercise and managing stress or worry is important for physical and mental wellbeing:</td>
</tr>
<tr>
<td>→ Use strategies to help you sleep (e.g. going to bed at the same time, reducing screen time before bed)</td>
</tr>
<tr>
<td>→ Try to eat a balanced diet to keep you strong and keep up your energy</td>
</tr>
<tr>
<td>→ Do light exercise regularly, if you can. This may mean a slow, short walk every day. Talk to your healthcare team about a plan for building up your fitness and exercise ability.</td>
</tr>
<tr>
<td>→ Use strategies to manage stress or worry. For example write down how you are feeling, practice relaxation or meditation, practice slow breathing (e.g. count to three on the in-breath and three on the out-breath).</td>
</tr>
</tbody>
</table>

Arm yourself with the facts

<table>
<thead>
<tr>
<th>Suggestions</th>
</tr>
</thead>
<tbody>
<tr>
<td>Information is power! Being able to relay clear information to others ensures that your needs and goals are clear and you can receive any support you need. This may relate to:</td>
</tr>
<tr>
<td>→ Your health and medical situation</td>
</tr>
<tr>
<td>→ Your needs, goals and priorities</td>
</tr>
<tr>
<td>→ Options available to you</td>
</tr>
<tr>
<td>→ Available supports and details of your back up team</td>
</tr>
</tbody>
</table>

Communication is key

At some point you will need to talk to others about your experience so they can understand and help. You may also face questions about physical changes, your health or why you have been absent. Being prepared ensures that you feel comfortable. Talking openly can also stop rumours and puts you in control of what other people know.

Plan what to say and how to say it.

Have a think about:

<table>
<thead>
<tr>
<th>Suggestions</th>
</tr>
</thead>
<tbody>
<tr>
<td>→ What you want to share. You will want to keep some stuff private and that’s ok. Decide what you want to say. This may mean planning it in your head or writing it down</td>
</tr>
<tr>
<td>→ Who you want to tell. You may want to talk to everyone yourself or share what you want to with a trusted friend who can tell others</td>
</tr>
<tr>
<td>→ How you want to communicate. Sometimes a conversation in person may be best but an email, letter or message may be easier</td>
</tr>
<tr>
<td>→ It can also be useful to:</td>
</tr>
<tr>
<td>• Practise telling your story to someone you trust so you get used to saying it out loud</td>
</tr>
<tr>
<td>• Imagine questions that people may ask. People may say silly things or ask silly questions and it can help to be prepared</td>
</tr>
<tr>
<td>• Know that you don’t have to share anything you don’t want to</td>
</tr>
<tr>
<td>• Know that you don’t have to know all the answers. You can always send people to ask someone else you trust</td>
</tr>
<tr>
<td>• Ask others who have been there for suggestions.</td>
</tr>
</tbody>
</table>
## Important things to know and do

### Suggestions

### Communication is key (cont.)

**Communicate with school, TAFE, university or work**

*When communicating with organisations it can be helpful to:*

- Identify a key contact as a single point of communication. This should be someone you feel comfortable with and trust. It may be a principal, class teacher, coordinator, disability support officer, counsellor, your boss or someone in human resources. You can negotiate with them what you share and if you choose, they can communicate with others. This can save time and energy.

- Communicate regularly so everyone is on the same page. This is especially important if anything changes such as your health, treatment, appointments, health risks, impacts and needs.

- Meeting in person is often useful to ensure that everyone is on the same page. It is a good idea to think about:
  - Who you want to be there with you in meetings
  - Your needs, and what you want the outcome to be
  - What you want to say and who will say what. Sometimes having others tell the story helps but you may want to do this yourself
  - Communicate in writing with others. This means the message is clear and you can keep a record of information shared with others.

### How to manage at school, study or work

- Plan to re-engage slowly. This may mean a shortened day at school or work or modified tasks or duties. You can take your time and build up slowly.

- Identify your learning strengths and challenges.

- Identify how you best learn and remember things. Use this type of information to help you to learn and remember (i.e. visual aids or written information).

- Use technology (e.g. online lectures/photographs/notes) to support your learning or work.

### How to manage at school, study or work (cont.)

- Ask for handouts or take photos of information at work or in class to help you remember.

- Sit at the front in class or at work to have better access to the information presented.

- Change activities every 30-40 minutes.

- Have planned rest breaks (and naps) during the day.

- Talk to your healthcare team about accessing formal assessments to identify strengths and learning any challenges if additional support is needed (e.g. occupational therapy or cognitive psychology assessments).

### Seek support

- Identify any changes and impacts as they arise. Write these down so you can talk to your healthcare team about them.

- Identify a key contact in your healthcare team who you can contact when you have questions.

- Talk to your oncologist or healthcare team for advice and referrals for support (i.e. referral to a social worker for practical or emotional support, a psychologist for mental health support, a dietician for help with weight and nutrition, or an exercise physiologist for help with managing fatigue and fitness).

- At the end of treatment, it can be helpful to ask for a summary of your diagnosis, treatment, and a plan for ongoing care and follow up. This can be a useful resource to give to others to understand your health and care needs.

- Reach out to someone you trust, ask for help or support from friends or find a local or online support group.

### Build your team

- Having a back-up team of support people around you who can also advocate for you and your needs can be really helpful! This may include family, friends and people from your healthcare team, local Youth Cancer Service or Redkite. Professional support and a key contact from your healthcare team can be especially helpful for medical back up and to advocate for your needs.
Slight Squeeze

KAZ
Hooray! I just beat cancer!
Hey: Where did everybody go?
